

# Top End Chill Air Conditioning Airconditioning Installation and Repairs

## Welcome to Top End Chill

We specialise in hydro cleaning. Top End Chill looks after supply & installation of new units & removal of old units throughout the Darwin area. Split system is our speciality. We install all brands & we are specialising in Fujitsu, Daikin & Panasonic.

At Top End Chill, we provide quality service & customer satisfaction is our top priority. We only supply the most reliable brands on the market, and use only the finest quality components. We pride ourselves on our efficiency, promptness and attention to detail service and installation.

We supply and install new split system air conditioners, Remove old air conditioners and replace with new, hydro cleaning.

Our services all areas: Darwin, Fannie Bay, Winnellie, Coconut Grove, Berrimah, Casuarina, Palmerston, Howard Springs, Coolalinga, Humpty Doo.

## About Us

Our new top of the line cooling systems are the ultimate solution to cooling down your Australian home. We are an Australian owned and operated company who specialize in the installation and maintenance of cooling systems.

We provide only the highest quality brands and the best tradesmen in the industry. So that you can rely on us, our work is backed with a 2 year guarantee. We only supply and install high quality and energy efficient systems from leading brands such as Panasonic, Mitsubishi Heavy Industries, Daikin, and Fujitsu.

Top End Chill has a successful separate cooling division. In this division, we have specially trained engineers who have extensive experience in evaluating the best type of commercial air conditioning system for your business, no matter the size.

Our company goal is to achieve ongoing working relationships with our clients that add value to both our businesses. By providing our clients with technical advice, budgeting expertise and a professionally operated installation and maintenance service, we aim to make Top End Chill Air Conditioning your preferred contracting partner.

**We are warranty agents for Fujitsu,**

## Our Services

Top End Chill provides regular and emergency maintenance on all of our systems. We offer service and installation with our most qualified expert electricians. With every residential or commercial service or installation we give a 2 year guarantee of all part and labour. We service all areas.

### What We Do

- » Split Systems
- » Refrigerated Air Conditioning
- » Installation of most units of all leading brands
- » Free quotes on all small projects
- » Unit only sales
- » System repairs
- » System Diagnostics
- » Wall Split Systems
- » Ducted Split Systems
- » Add On cooling systems
- » Centralized air

### Other Services

- » Australian owned & operated.
- » 2 year labour 5 year on air cons
- » All leading brands serviced
- » Energy efficient solutions

## "CAT Electronic Anti-Corrosion Systems"

### Introduction

The CATIII is a unique system that replaces traditional coating methods to control rust. The CAT System leverages an optimal combination of voltage and frequency to provide maximum corrosion suppression in "free air" steel structures such as automobiles, Air conditioning, mobile plant, machinery and suitable fixed structures. We thank you for your interest in the CAT System Electronic Anti-Corrosion System.

### About Us

CAT Systems has been the innovator in high performance Electronic Rust Protection products for 25+ years. The CATIII Electronic Rust Protection System is the very latest in technology, designed to stop rust in the harshest environmental conditions. Not only do our products protect against rust, they also significantly reduce the time, effort and cost associated with maintaining the condition of your vehicle. Our goal is to ensure that our products and service are the benchmark by which the competition is measured!

### In Summary

Controlling rust or corrosion electronically is not a new technology. Cathodic protection

systems have been used to control corrosion in ships, jetties, land based fixed structures like bridges, tanks and subterranean metal structures for over 100 years.

### **Advantages of CAT Rust Protection**

There are many great reasons to choose a CAT.

- All the metal on the vehicle or structure are reached, both inside and out. All the places where traditional (spray) coatings may be missing or not typically applied.
- The process is good for a lifetime—unlike coatings which degrade over time and need constant re-application • The rust suppression is an ongoing process 24/7.
- There is no risk of chemical leakage unlike coatings.
- There is no odour - There is no danger to the environment.
- There is no electronic interference – CAT is certified to comply Australian, US and European EMC regulations.
- CAT can be transferred easily.
